Introduction to additive manufacturing

This course is designed for both polymers and metals. It will assist you with understanding the basics of additive manufacturing and how to implement the process within your organisation.

Deliverables

- Understanding the additive manufacturing basics.
- AM system capabilities.
- What is additive manufacturing.
- Component orientation and support structures.
- Post processing orientation and support structures.
- How to integrate AM into the design process within your organisation.
- Identifying potential components for additive manufacturing.
- Examples of additive manufacturing - case studies.
- Full tour of the 3T AM facility.

Details

- 1 - 2 day interactive presentation.
- Typical group size of 10 - 20.
- Located at 3T facility or customer site.
- Participant level - Beginner.

Cost: £150 per person
